Project briefer — where we are today

A one-glance status of the site. This file is the source of truth for the branded `mzansi-briefer.pdf` alongside it — edit the lists below, then run `node docs/render-pdfs.mjs` to rebuild the PDF. Last updated: 2026-08-09 · Codename: Genesis 🌱

LIVE & WORKING

New masthead — mobile & desktop

Full-bleed bar with the brand badge (logo + MZANSI MONEY MATTERS + cyan tagline), menu on the left, ☒ Subscribe on the right. Same design language across phone and laptop.

Newsletter signup (real, not a mailto)

Envelope opens a signup panel; addresses POST to FormSubmit, which emails each subscriber to `mattersmzansi@gmail.com`. States: sending / success / error.

Site-wide search

Search icon opens a live filter across news articles, NYSE stocks, top cryptos, calendar events, fixtures and the pages themselves. Click a result to jump.

Live NYSE prices

Alpha Vantage feeds ticker data on the NYSE page. Sample data shows when the daily API quota is used up.

Live crypto data

CoinGecko powers the Crypto page — no key needed, generous free tier.

Live soccer odds

The Odds API powers the Betting fixtures + 1X2 odds. Falls back to sample data if the key is missing.

Economic Calendar (seed data)

26 upcoming global data releases across 8 countries. Ready to swap for a live feed when we pick one.

Home "Today's brief"

Rate-holds top story, JSE/NYSE/BTC snapshot, matches strip, calendar peek — the front-page recap of everything.

Auto-deploy on Vercel

Every push to main goes live at `www.mzansimoneymatters.co.za` within a minute.

NOT THERE YET

JSE page

Still a "coming soon" placeholder. Needs a live South African market data source (Sharenet Trade Socio, EOD Historical Data, or a paid JSE licence).

Deep links from search results

Search jumps to the right page but doesn't scroll to or highlight the exact item. Needs anchor IDs + `scrollIntoView`.

Search on mobile

We removed it to keep the header clean. Desktop only for now — a phone-friendly version (icon in menu?) is on the list.

Newsletter list at scale

FormSubmit is a relay, not a mailing list. First proper send will need Buttondown / Mailchimp / Beehiiv to store subscribers and send campaigns.

Alpha Vantage rate limit

Free tier is 25 requests/day. On a busy day the NYSE page falls back to sample data. A paid tier or a caching layer fixes it.

Live economic calendar

Currently hard-coded. Trading Economics / FMP would give a live feed but both charge past a small free tier.

Bundle size

>500kb single JS chunk (build warns). Code-splitting per route will speed up first paint on 3G.

Analytics & error tracking

No Google Analytics / Plausible / Sentry yet. We're flying blind on traffic and crashes.

Legal footer

No T&Cs, privacy notice, or POPIA/GDPR cookie disclosure yet — required before we drive real traffic.

Contact details

No contact page, footer email/WhatsApp, or socials yet. Quick win; needs owner to decide what to expose (email only, or WhatsApp / Instagram / X too?).

Embedded widgets

No TradingView charts on JSE/NYSE/Crypto yet, no YouTube analysis videos, no live X/Twitter finance feed. All are free-to-embed and would make the pages feel much more alive.

NEXT UP (MY PICKS)

Turn the JSE page live (pick a data source, get a key, wire it up).

Deep-link search results to the exact item (article/ticker/fixture).

Move signups to a proper mailing-list tool + design the first weekly email.

Add a lightweight analytics tag (Plausible is privacy-first & POPIA-friendly).

Ship a footer with T&Cs / privacy / contact.
